

# Chromium Issue Tracker

## Quick Start Guide

[External - Final GA version]

Last updated: January 2024

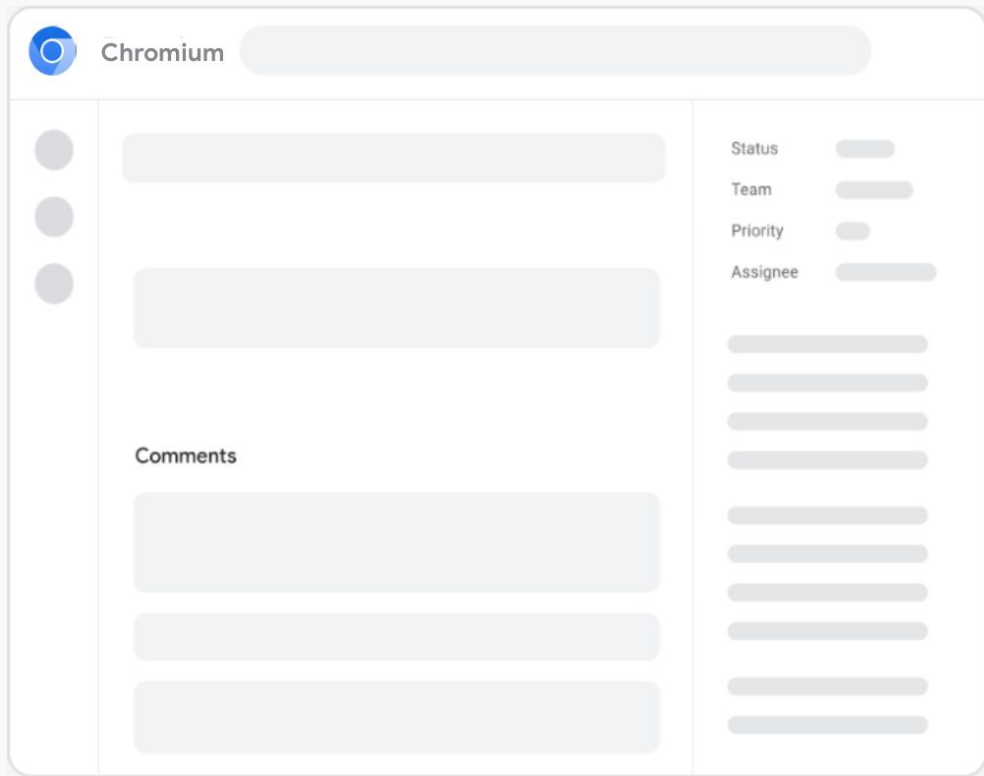

# What is a Tracker?

Proprietary + Confidential

A Tracker is a siloed version of Google's Issue Tracker that includes only issues relevant to a certain OSS project, such as Chromium.

It contains similar functionality to Monorail for the main issue tracking journeys such as filing, tracking and collaborating on issues.

The Chromium Tracker can be found at [issues.chromium.org](https://issues.chromium.org) and more detailed documentation can be found at [Google Issue Tracker](#).

# How issues are organized in Issue Tracker

## Primary concepts that touch almost every workflow

**Issues** – the atomic unit of Issue Tracker

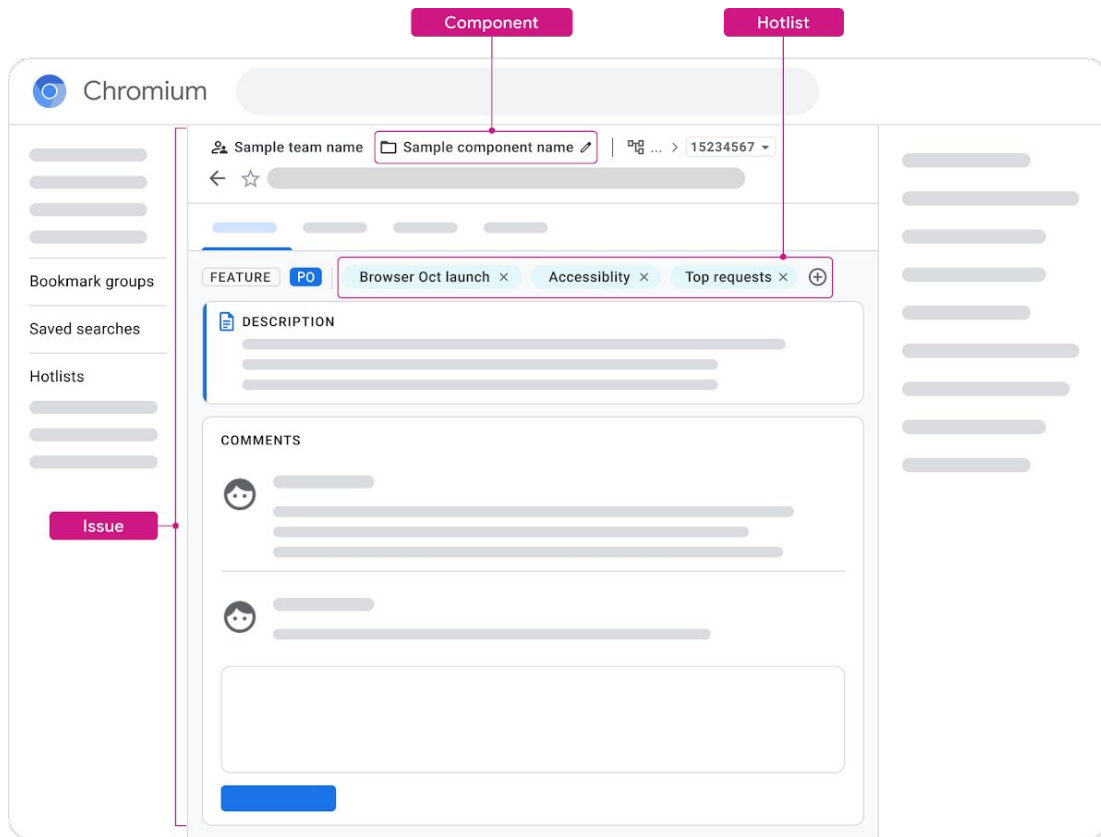

**Components** – issue containers

- Typically represent vertical products, teams, and/or functional focus area
- Most configuration / access rules are derived by an issue's component
- Issues fall under a *single* component

**Hotlists** – issue “tags”

- Typically represent themes, iterations and/or workflow stages that are horizontal by nature
- Issues can have *multiple* hotlists

*Covered on the following slides*

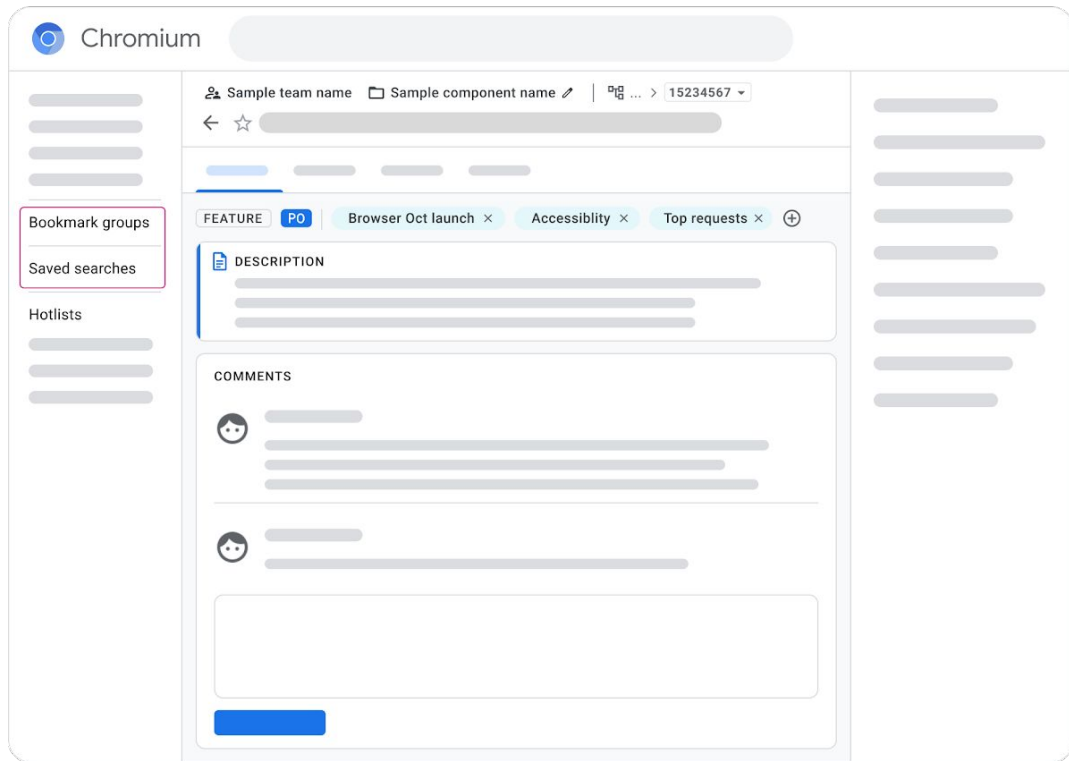

# How issues are organized in Issue Tracker

## Secondary concepts that are used for some workflows

**Saved searches** - allow you to save the parameters of existing searches to perform them again

**Bookmark groups** - allow you to 'collect / save' a set of saved searches and / or hotlists

# Where to start?

Start here

[issues.chromium.org](https://issues.chromium.org)

Find your issues

Data in Monorail was searched by  
**Monorail components** or **labels**.

=>

In Issue Tracker, you find **Monorail** data  
by either an Issue Tracker **component**,  
special migration **custom field**, or a  
**hotlist**.

See examples in **next slide**.

Save your issues

**Star hotlists** you want to track/use.

Use the search builder to modify search,  
then create a **saved search**.

Save these preset Chrome-wide  
Bookmark Groups.

- [Chromium Migrated Hotlists \(ID:835579\)](#) contains all hotlists created for Chromium's migration to the new Tracker
- [Chromium Critical Hotlists \(ID:860925\)](#) contains critical hotlists required for managing Chrome

# Find by Monorail component and labels

## By Monoral Component Name

All Monorail components have been mapped to a custom field (“Component Tags”) for easy searching. Example query -  
customfield1222907:"Blink>HTML>Popover”

```
//copy to Issue Tracker  
status:open  
customfield205126:"monorail component name"
```

A "primary" **Issue Tracker** component has been chosen for each issue. The logic is based on last assigned in Monorail. If no component existed a default was set.

```
/* copy to Issue Tracker (to trigger autocomplete),  
componentid:"Chromium > Internals > Media" */  
status:open componentid:"monorail component name"
```

## By Monoral Label

First find your hotlist id [coming soon].

```
//copy to Issue Tracker  
Hotlistid:[insert]
```

If you are unable to find the hotlist in the list, they have been migrated as a custom field, use the component workflow.

*Additional search queries assistance are available [here](#).*
